

PowerSearch Web Marketing, AdWords Management and Search Engine Optimization Pricing.

The PowerSearch web marketing package is designed to get your company in the top three search engine positions for Google, Yahoo and MSN in almost any market for a specific search term.

Your site's prominence on the search engines will be determined by the number of links in and more importantly the quality. We have a detailed award winning program to achieve your goals. It consists of five advanced components - all perfectly legal and approved by the search engines - but from the number of other web companies who have tried to find out from us - not something we can tell all about (like the secret formula in Coca-Cola). But here is an example - rather than spamming thousands of webmasters asking for links as normal web designers trying to get links do - or submitting your site to hundreds of useless directories, we have experts who write articles on your topics which often appear on literally thousands of sites each with a link back to you. Typically we would write 15-20 articles for your site. Here is an example of what just one of them would achieve in terms of links back to your site over 300 links detected by Google to the site being promoted from ONE article. Here it is on Yahoo over 100 links.

This isn't easy - don't believe anyone who says it is. We can't guarantee number one position although we can be fairly sure of it from past performance - so far our success has been 100% [a few examples - 1, 2, 3 - but we can say clearly that in three years of doing this for other people no-one who has ever come to our team - then gone away to try it themselves - has ever succeeded themselves.
